Claim 27. (Canceled)

Claim 28. (Canceled)

Claim 29. (Canceled)

Claim 30. (Canceled)

Claim 31. (Canceled)

Claim 32. (Canceled):

Claim 33. (Canceled)

Claim 34. (previously presented) A system for distributing data comprising:
at least one device designed to operate according to configuration data
defined by a user;
a user interface coupled to at least one server system via a network
wherein said user interface is physically separable from said at least one
device and configured to obtain said configuration data from said user and
provide said configuration data to said at least one server system;
said at least one server system coupled to said at least one device via
said network, wherein said at least one server system is configured to
relay said configuration data to said at least one device when said at least
one device issues a request for said configuration data.

Claim 35. (canceled)

Claim 36. (previously presented): Digital photo delivery system comprising:
at least one wireless digital camera apparatus, wherein each said apparatus includes a processor, a memory, and a destination address and one or more previously defined recipient codes stored in said memory; user interface connected to said processor for at least displaying one or more said recipient codes and receiving signals indicating user selection of a displayed recipient code; a digital camera connected to said processor for capturing one or more digital images in response to signals from said user interface; a RF communications device connected to said processor; and processor control means, responsive to signals received from said user interface, for transmitting a message, including at least said selected recipient code and one said digital image, to said destination address via said RF communications device; and
a server associated with said destination address and responsive to messages received at said destination address from each said wireless digital camera apparatus; server memory storing account configuration data including recipient code data; server communications means; and server control means for parsing said recipient code from each said message and processing each said message according to said account configuration data associated with said recipient code, and for transmitting account configuration data including at least one recipient code to at least one said wireless digital camera apparatus; and
wherein said processor control means of each said wireless digital camera apparatus is responsive to receiving account configuration data transmitted from said server to update said memory of said wireless digital camera apparatus with at least a portion of said account configuration data.

Claim 37. (previously presented): A method for archiving and distributing digital images using a digital apparatus with wireless packet data network access and image capture capabilities, comprising:
capturing digital images with the digital apparatus;
transmitting a message including at least one digital image and at least one code to a predefined remote server;
parsing the message at the server and processing each image according to each code, by at least
selecting at least one set of recipients corresponding to said code, to whom said at least one image is to be sent, each set including at least one recipient; and
sending a message to each selected set of recipients with instructions for accessing said at least one image.

Claim 38. (Canceled)
